Alluvial Regolith Landforms

Collored Regolith Landforms

Vegetation communities include: Bimble Box (Eucalyptus populnea), Warrior Bush (Eremophila michellii), and various species of lignum (Eucalyptus). Vegetation is dominated by Bimble Box, which is common in this area. Other species include: Acacia aneura (mulga), Grevillea striata, and various species of Cassia (forbs and grasses). Vegetation occurs in a savannah and woodland setting. Fine and coarse sands and silts, as well as weathered bedrock, dominate this area. Lithic material consists of quartz and maghemite. Vegetation is typically low and sparse, with scattered occurrences of beefwood and other species.
