

LARYSA HALAS

"Larysa joined P4 in 2003, and has been responsible for almost all of the spatial analysis, GIS construction, map production and landscape and salinity modelling for our uplands landscape salinity projects in the Murray-Darling Basin. Larysa is a quiet achiever, who has shown extreme dedication in developing high quality outputs. In particular, Larysa has made a significant contribution to the MDBC and Central-West Projects. Larysa's specialist modelling skills have also been utilised in a range of other projects, including the River Murray Corridor, and the SA SMMSP projects, while she has also been responsible for many of the modelling and map outputs for the Landscape Analysis project, and assisted in the development of a new methodology for determining salt 'loads' from AEM datasets in the Salinity Dynamics project."
