

JOHN JOSEPH

John Joseph was appointed to The University of Adelaide as a Senior Lecturer in Exploration Geophysics in mid 2002. Prior to joining the university John had obtained First Class BSc and MSc degrees from India and a DSc from University of Tokyo, Japan. He was a NEDO Researcher at the Geological Survey of Japan, a Post Doctoral Fellow at Tokai University and a JSPS Fellow at Institute of Geosciences, AIST, Tsukuba, also in Japan. John has made a valuable contribution to LEME projects including a number of regional projects - most particularly the Tanami and CurnaMinex Projects. He has distinguished himself by persisting with EM surveys in the face of apparently impenetrable bush, heat, dust, flies and the occasional flood. Somewhere along the way he become a true Australian and has the citizenship certificate to prove it! He has supervised a number of CRC LEME Honours students and co-supervised a number of PhD students. John has also contributed to the UA teaching program: covering part of the third year Theoretical Geophysics Course, and running a one-week Honours course in Airborne Geophysics. John has been popular with students and has helped out at a number of outreach events over the last few years. One of his legacies in the Discipline of Geology and Geophysics will be the Mineral and Uranium interactive map of South Australia that UA plans to use at future Open Days. Staff at UA join with staff of CRC LEME in wishing John all the best for the future.
